

NexaTech Solutions — AI/ML Engineer Job Description

Position

AI/ML Engineer

Company

NexaTech Solutions

Job Summary

NexaTech Solutions is seeking an AI/ML Engineer to design, develop, evaluate, and deploy machine learning solutions. The role involves working with data, building predictive models, developing AI applications, and collaborating with software engineering teams.

Required Skills

- Python programming
- Machine learning fundamentals
- Deep learning fundamentals
- NumPy and Pandas
- Scikit-learn
- TensorFlow or PyTorch
- SQL
- Git and GitHub
- Problem solving and analytical skills

Preferred Skills

- Natural Language Processing
- Computer Vision
- Docker
- AWS or another cloud platform
- REST APIs
- Experience deploying machine learning models

Education

Bachelor's degree or equivalent academic background in Computer Science, Artificial Intelligence, Machine Learning, Information Technology, or a related field.

Experience

Fresh graduates and candidates with internship or project experience in machine learning are eligible. Professional experience in developing and deploying ML applications is an advantage.

Responsibilities

- Collect, clean, and analyze datasets.
- Develop and evaluate machine learning models.
- Build AI/ML prototypes and production-ready components.
- Perform model evaluation and error analysis.
- Collaborate with software engineers and product teams.
- Document experiments, models, and technical decisions.
- Use Git-based workflows for source-code management.

Location and Work Arrangement

The position follows a hybrid work arrangement. Some meetings, training sessions, and project activities may require on-site attendance.

Selection Process

The selection process may include resume screening, a technical assessment, a technical interview, and a final HR discussion. Interview scheduling is subject to slot availability.

Important Note

This job description is fictional and created specifically for the Hiring & Onboarding Agent demonstration project.
